

SECTION 8. 2001 FSIS IMPORT PLAN RESULTS

This section reports the results from the 2001 FSIS Import Residue Plan. Descriptions of the Import Monitoring Plan and Import Surveillance Testing are found in Section 2 on page 6.

The Import Monitoring Plan is designed to detect, with a predetermined level of confidence, specific compounds in each of the designated products. The Import Monitoring Plan is not designed to provide an estimate of an overall import violation rates for all chemical residues. **The data on violations reported should not be summed across any product line with the intent of arriving at a single value to represent the percent occurrence of violations over all the products tested. This mathematical operation will not produce a statistically valid estimate for the population, given the sample design in use. Care must be taken when making statistical inferences from these data.**

The 2001 FSIS Import Monitoring Plan includes the testing of eight compound classes of drugs and pesticides, comprising approximately 50 residues. During 2001, the United States imported approximately 3,843,306,000 pounds of fresh and processed meat, poultry, and egg products from 31 countries. Two violations were found out of 5,584 reported results.

The results from the Import Monitoring Plan are reported by country of origin. These results are presented below in Table 8.1, *Import Residue Monitoring Plan Results*, which includes the number of reported results obtained for each compound class tested by product class. The reported results show the number of non-detections, violations and non-violative positives.

The Increased Monitoring Program is described in section 2 on page 6. The results from the Increased Monitoring Program are reported by country of origin. These results are presented in Table 8.2, *Increased Monitoring Results*, which includes the number of reported results obtained for each compound tested per product class and the data shows the number of non-detects, violations and non-violative positives.

Surveillance Testing is described in section 2 on page 6. The results from the Surveillance Testing are reported by country of origin. These results are presented in Table 8.3, *Surveillance Testing Results*, which includes the number of reported results obtained for each compound tested per product class and the data shows the number of non-detects, violations and non-violative positives.
